FLOW METER DEADLINE NEARS

The Little Blue Natural Resources District is requiring operable flow meters on all active irrigation wells, or irrigation systems, across the District. This has been an ongoing, 3-year installation requirement, that ends on March 31, 2017. All meters will need to be installed by that date. Annual reporting on acres of crops irrigated and ending meter readings are also a District requirement. This has been ongoing since the metering installation began, but will be required beginning this fall. Please contact the LBNRD office at 402-364-2145 when the meter is in so it's installation can be verified.
